### CHILDREN: C19 SHOTS FOR 5-11 YEAR OLDS IN SOUTH AFRICA

# Why we must oppose this reckless move

#### THE PEOPLE'S DOCTOR - DR EV RAPITI

C19 shot lobbyist and Department of Health Director General Dr Nicholas Crisp

## **Children don't need Covid shots**

The **Department of Health** decision to make Covid-19 shots available to children aged 5 to 11, despite a **MAC recommendation against it**, is **absolutely shocking**, given: 1) Covid is over

2) these jabs are ineffective against a highly mutated strain, Omicron

3) the current strain is mild, needing no intervention

4) 90% of children have **natural immunity** which is far superior to the shots

5) There is a high risk of myocarditis in children based on a study in Thailand

6) Children have a **100% recovery rate** with no hospitalisation or complications

7) One has to jab 220,000 individuals to avoid one hospital admission

8) There are **excellent treatments** for covid-19 and its complications

9) These jabs are not fully tested especially for children

10) **Proper informed consent** is not being done at vaccination sites

11) Sites are **not properly equipped** for adverse events

12) The jab results in an autoimmune response in the organs, so they are not safe for children with an autoimmune disorder

13) Children with a compromised immune system **will not be able to produce** adequate immunity to the shot

14) Leading infectious disease specialists, like , Dr Paul Offit, come out in the open saying they refuse to give their children boosters because of risk of myocarditis
15) Former WHO scientist and paediatrician, Dr Soumya Swaminathan said that there is no data that healthy children need to be vaccinated

16) the shots leads to VAIDS ('vaccine' acquired immune deficiency syndrome)
 17) There is no compensation for jab victims if patients can't prove cause

(See page 2)

### CHILDREN: C-19 SHOTS FOR 5-11 YEAR OLDS IN SOUTH AFRICA

## We must protect children from the risks

18) The contents of shots have NOT been divulged by the manufacturers
19) Independent researchers from many laboratories have discovered that the vials contain graphene oxide and lipid nanoparticles, both of which are toxic
20) The shot spreads throughout the body and leads to an autoimmunity reaction wherever the spike lands

21) the antibodies for these shots is **almost zero** after 8 months, requiring boosters every three months

22) repeated boosters can lead to **immune fatigue** and render individuals incapable of protecting themselves from common infections like shingles

23) in females, the synthetic mRNA created spike from the shots often land in the ovaries, and can cause menstrual irregularities and/or render them infertile
24) Pfizer admitted that only 50% of their vials have the intact mRNA vaccine, meaning that 50% of the people receiving the jab, are receiving a dud jab
25) The CEO of the CDC stated that the vaccinated and those with natural immunity are equally protected
26) both jabbed and non-jabbed can spread the virus equally, according to CDC
27) The spokesperson for Pfizer admitted to the EU parliament did not test the jab for transmission because they were traveling at the "speed of science"(sic)
28) Fauci admitted recently, after insisting on masking and boosters that the current mRNA shots do not give lasting protection

29) The Joint Committee for 'Vaccine' Intervention (UK) strongly recommended that children **not** be given the covid shot because of the low complications from corona virus and **high level of natural immunity** 

If these shots will **still** be made available despite the risks, there must be **FULL** disclosure about the **lack of effectiveness**, **side effects**, **and the right to refuse**, in accordance with the Bill of Rights, the NUREMBERG code, and the Children's Act.

After all that we know about these shots, the question remains: what is the actual rationale for Dr Nicholas Crisp to promote these toxic shots for our children?

Common sense must prevail, and if it doesn't, I sincerely hope that parents, guardians and all adults will ensure they make the right decision to protect our children.

Dr E V Rapiti, Cape Town, South Africa . SA VAERS Advisor/Advocate P2
